

What are the different types of energy storage policy?

Approximately 16 states have adopted some form of energy storage policy, which broadly fall into the following categories: procurement targets, regulatory adaptation, demonstration programs, financial incentives, and consumer protections. Below we give an overview of each of these energy storage policy categories.

Which energy storage technologies offer a higher energy storage capacity?

Some key observations include: Energy Storage Capacity: Sensible heat storage and high-temperature TES systems generally offer higher energy storage capacities compared to latent heat-based storage and thermochemical-based energy storage technologies.

Why do we need a co-optimized energy storage system?

The need to co-optimize storage with other elements of the electricity system, coupled with uncertain climate change impacts on demand and supply, necessitate advances in analytical tools to reliably and efficiently plan, operate, and regulate power systems of the future.

What happens when a solar storage system is fully charged?

When the storage system is fully charged, energy will need to be drawn from the grid to meet the shortfall, considering a solar thermal system, cogeneration unit, and gas boiler. A thermal storage device can also be incorporated, which can be charged from excess solar thermal energy or the cogeneration unit.

Should the government focus on alternative electrochemical storage technologies?

The report recommends that the government focus R&D efforts on other storage technologies, which will require further development to be available by 2050 or sooner -- among them, projects to advance alternative electrochemical storage technologies that rely on earth-abundant materials.

Why is a data-driven assessment of energy storage technologies important?

This data-driven assessment of the current status of energy storage technologies is essential to track progress toward the goals described in the ESGC and inform the decision-making of a broad range of stakeholders.
