A generator is a device that converts mechanical energy into electrical energy. Generators typically have petrol or diesel-fueled engines. Inverter generators are a newer type of generator that uses advanced technology to produce a more stable and efficient power output. They are quieter and tend to be more compact than other types of generators.

The average American home uses 900kwh per month or 30kwh/day, which is equal to 25-35 250W solar panels. The solar panel's rating and how appliances are used determine the total monthly wattage consumption. RV monthly power consumption is much lower though, and solar powered homes use power conservatively.

Unlike most conventional fuel or gas generators, solar generators have no moving parts and do not use liquid fuel, which means the likelihood of needing to pay for any repairs is significantly lower. If the prospect of losing power for hours or days at a time concerns you, the Bluetti AC200MAX portable power station offers a very compelling solution.
