What are the advantages of a blade battery?

The blade battery cancels the module design and reduces the design of many structural parts. At the same time, the upper and lower boxes are closely connected to the battery core, which significantly improves the volumetric energy density. This is also BYD's widely publicized 50% increase in volumetric energy density. 2. Low cost

How long does a blade battery last?

In addition to its ion batteries. The Blade Battery has a lifespan of up to 1.2 million kilometers, significantly longer than conventional lithium-ion batteries' lifespan. This extended lifespan is partly due stability. The Blade Battery also has a faster charging time than traditional lithium-ion batteries.

How safe is a blade battery?

Currently, the Blade Battery is based on LFP. Compared to batteries based on NMC, no-tably the Ni-rich NMC 811, the LFP battery is significantly safer thanks to its electrochemical properties. The BYD nail penetration test in Figure 3 indicates that the Blade Battery design ofers a very high level of safety.

What is blade battery?

Blade Battery can change the size of the battery pack in the X and Y directions according to the vehicle space, and develop batteries of different specifications. This platform-based battery effectively reduces development costs and time. Its patent shows that there are at least 8 types of blade battery solutions.

What are the safety features of a blade battery?

of the most significant safety features of the Blade Battery is its enhanced thermal stability. fires and explosions. The Blade Battery's unique stacked design reduces the stress on its cells, improving its thermal stability and making it less prone to overheating. In addition, the and prevent it from overheating.

Why is a blade battery better than a battery core?

Because the blade battery has a larger heat dissipation surfaceand a thin thickness, the blade battery core has better heat dissipation performance. From the data released by BYD's blade battery patent, we can see the temperature simulation results of battery cells with different thicknesses inside the blade battery.
