

After the inverter has converted your solar panels' DC electricity into AC electricity, the AC cable will take it to your PV distribution board - that is, a fuse box for your solar panels. And in the vast majority of cases, this distribution board is connected to the supply meter - it won't need connecting to your existing consumer unit.

As a result of sustained investment and continual innovation in technology, project financing, and execution, over 100 MW of new photovoltaic (PV) installation is being added to global installed capacity every day since 2013 [6], which resulted in the present global installed capacity of approximately 655 GW (refer Fig. 1) [7]. The earth receives close to 885 ...
