

How many miles can a blade battery supply?

The Blade Battery construction increases that number by 50 percent, so that 60 percent of the battery pack is now dedicated to energy storage. In other words, a battery pack of the same size can now supply 373 miles (600 km) of driving range instead of 249 miles (400 km).

What is a blade battery?

The structure of the Blade Battery from cell to pack. At the center of the design of the Blade Battery is the cell geometry, which has a much lower aspect ratio compared with conventional cylindrical or prismatic cells. According to BYD's patents, the cell depth (Z axis) is 13.5 mm while the cell length (X axis) can range from 600 mm to 2500 mm.
