

However, the work is not suitable for a PEBFCS with energy storage system (ESS). Nowadays, with the rapid development of energy storage technology, installing ESS in the charging station can achieve better demand response. However, only a few published literature focuses on charging stations with ESS.

A battery energy storage system can help manage DCFC energy use to reduce strain on the power grid during high-cost times of day. A properly managed battery energy storage system can reduce electric utility bills for the charging station owner if the local utility employs demand charges or time-of-use rates. With certain types of utility
