Is concrete a thermal energy storage material?

OLAR PRO

Concrete is a widely used construction material that has gained attention as a thermal energy storage (TES) medium. It offers several advantageous properties that make it suitable for TES applications. Concrete has a high thermal mass, enabling it to absorb and store significant amounts of heat energy.

What is the experimental evaluation of concrete-based thermal energy storage systems?

The experimental evaluation of concrete-based thermal energy storage (TES) systems is a critical process that involves conducting tests and measurements to assess their performance and validate their thermal behaviour.

Can concrete thermal energy storage systems be simulated?

The present numerical studies on simulating concrete Thermal Energy Storage (TES) systems represent a critical dimension of research, offering insights into the complex dynamics of energy storage. By employing advanced modelling techniques, researchers aim to simulate and optimise the performance of concrete TES systems under varying conditions.

Can embedded pipe systems in concrete be used for thermal energy storage?

By continually advancing these aspects, engineers can enhance the effectiveness and reliability of embedded pipe systems in concrete for thermal energy storage applications. Modelling and simulation techniques are indispensable for the design and analysis of embedded pipe systems used in thermal energy storage.

Can thermal energy storage in concrete be economically feasible?

When conducting an economic feasibility and cost analysis of thermal energy storage (TES) in concrete, various aspects need to be considered. One of the primary factors is the assessment of initial investment costs.

How can engineers optimise concrete-based thermal energy storage systems?

By understanding and leveraging this property, engineers can design and optimise concrete-based thermal energy storage systems to achieve efficient heat storage and release. The specific heat of some of the common substances are summarised in Table 1.
