

Disadvantages of concentrated solar thermal power generation

What are the disadvantages of concentrated solar power plants?

The major drawback of Concentrated Solar Power Plants is that capital cost and maintenance cost is more expensive than other power stations. It is even more expensive than Solar PV Plants. A study reveals that the levelized cost of electricity for Solar Thermal Plant is \$119 to \$251 per MWh. Whereas, solar PV systems only cost \$50 to \$60 per MWh.

What are the disadvantages of solar thermal power plants?

Listed below are some of the major disadvantages of solar thermal power plants. The major drawback of Concentrated Solar Power Plants is that capital cost and maintenance cost is more expensive than other power stations. It is even more expensive than Solar PV Plants.

What are the technological and economic problems faced by solar power plants?

Several technological and economic problems must be overcome by concentrated solar power plants, thermofluids and heat transfer fluids, and thermal energy storage systems. Economic problems include high capital costs, pricing unpredictability, finance, lack of scale, material prices, availability, and operational expenses.

What are the advantages of concentrated solar power technology?

Round-the-clock generation of electricity is another remarkable advantage of concentrated solar power technology, especially when compared to photovoltaic solar panel and wind power technologies. Take note that photovoltaic solar panels and wind power are intermittent in nature.

What is concentrated solar power (CSP) & thermal energy storage (TES)?

Concentrated solar power (CSP) is a promising technology to generate electricity from solar energy. Thermal energy storage (TES) is a crucial element in CSP plants for storing surplus heat from the solar field and utilizing it when needed.

Are solar thermal power plants dangerous?

Solar thermal power plants need tons of water for operation, which can be a problem if it is located in desert areas. Because solar thermal plants use hundreds of massive mirrors, it can leave a negative impact for the animal wildlife on the desert and it could endanger species.

The keywords "concentrated solar power" or "CSP" or "Concentrating solar power" were combined with "solar energ*" AND renewable energ*", which are the most frequent author keywords in the abstracts and titles of the publications of the investigated topic, as shown in Figure 1. The * allowed us to consider terms and words both in singular and plural forms.
