How does a large solar facility affect wildlife?

Large solar facilities in particular can also fragment important wildlife habitat or migration corridors via fences and landscape alteration, and can restrict gene flow for animal as well as plant populations.

Can solar parks double as wildlife habitat?

Many agricultural landscapes have been cleared of trees to provide pasture for livestock. It means wildlife that rely on trees have lost vast tracts of habitat. So we must find new places for wildlife to forage, rest, shelter and breed. My work examines how solar parks on agricultural land can double as wildlife habitat.

Can a solar farm be a agrivoltaic system?

But solar farms and actual farms don't necessarily need to be in opposition. It's possible to co-locate solar and crops into "agrivoltaic systems," which can feature grazing grass, corn grown for biogas, and even lettuce and tomatoes that may flourish under solar panels. Other crops could even be grown under semi-transparent solar panels.
