According to the characteristics of electromagnetic thermal energy storage, the full-bridge inverter and resonant circuit with simple structure, high voltage utilization and high output power are used in this paper. By establishing and simplifying the electromagnetic thermal conversion circuit model of composite resonance, the control ...

through the consideration of the flow of power, storage of energy, and production of electromagnetic forces. From this chapter on, Maxwell's equations are used with­ out approximation. Thus, the EQS and MQS approximations are seen to represent systems in which either the electric or the magnetic energy storage dominates re­ spectively.

The objective of this paper is to develop an electromagnetic repulsion mechanism for a 40.5 kV vacuum circuit breaker and then to make an optimization. Design of experiments (DOE) ...

The motor power is small. For example, when the energy storage power supply cannot be cut off due to the failure of the limit switch and its auxiliary contact in the energy storage circuit, or the relay or its auxiliary contact 49MX in the energy storage circuit is damaged as shown in the figure, the energy storage motor will be burned.
