

The commercial dianhydride, 1,6,7,12-tetrachloro-3,4,9,10-tetracarboxylic dianhydride (Cl-PDA), is an intensively studied acceptor molecule with low synthetic cost, excellent stability, and strong light absorption, which is widely used in fields such as dye industry and organic solar cells [22, 23]. However, little research has been reported on utilizing Cl-PDA ...

Refrigerators with this rating must meet strict energy efficiency criteria set by the U.S. Environmental Protection Agency and the Department of Energy. Energy Star refrigerators are about 9% more efficient than models that meet the minimum federal efficiency requirements, which helps reduce greenhouse gas emissions and other pollutants.

Due to high power density, fast charge/discharge speed, and high reliability, dielectric capacitors are widely used in pulsed power systems and power electronic systems. However, compared with other energy storage devices such as batteries and supercapacitors, the energy storage density of dielectric capacitors is low, which results in the huge system volume when applied in pulse ...
