Can FEMP assess battery energy storage system performance?

This report describes the development of a method to assess battery energy storage system (BESS) performance that the Federal Energy Management Program (FEMP) and others can use to evaluate performance of deployed BESS or solar photovoltaic (PV) plus BESS systems.

What is a large-scale battery energy storage system (BESS)?

Large-scale battery energy storage system (BESS) can effectively compensate the power fluctuations resulting from the grid connections of wind and PV generations which are random and intermittent in nature, and improve the grid friendliness for wind and PV generation grid integration.

What is a battery energy storage system?

Battery energy storage systems provide multifarious applications in the power grid. BESS synergizes widely with energy production, consumption & storage components. An up-to-date overview of BESS grid services is provided for the last 10 years. Indicators are proposed to describe long-term battery grid service usage patterns.

What are the different types of energy storage systems?

\*Mechanical, electrochemical, chemical, electrical, or thermal. Li-ion = lithium-ion, Na-S = sodium-sulfur, Ni-CD = nickel-cadmium, Ni-MH = nickel-metal hydride, SMES = superconducting magnetic energy storage.
