

Extra long wind blades

What is the world's largest wind turbine blade?

Manufactured by LM Wind Power, the 107-meter wind turbine blade is the world's first blade over 100 meters in length and is one of the biggest single-components ever built. The 107-meter blade powers GE Renewable Energy's Haliade-X 12 MW offshore wind turbine, the world's most powerful wind turbine to date.

What are ultra-long wind turbine blades?

Ultra-long wind turbine blades are a product of game-changing talent, teamwork and technology. Alongside our suppliers and customers, LM Wind Power is living our vision - Together, we capture the wind to power a cleaner world.

What is the world's first wind turbine blade?

The LM 107.0 P - world's first wind turbine blade to surpass 100 meters! Manufactured by LM Wind Power, the 107-meter wind turbine blade is the world's first blade over 100 meters in length and is one of the biggest single-components ever built.

Who makes the best wind turbine blades?

Fast-forward 40 years, the Lunderskov Pilot Plant continues to manufacture the longest and most advanced blades in the world, and LM Wind Power is the world's leading independent blade supplier, with factories in all major wind markets. Quite a journey, for both the company and its record-breaking blade!

Which wind turbine has the longest rotor blade?

Siemens has manufactured the world's longest rotor blades for a wind turbine, a culmination of the rapid advancement in wind power technology during the last 30 years. Created using specialist technology, the B75 blades measure a staggering 75 metres in length.

How big is a wind turbine blade?

Those blades, made by Danish firm LM Wind Power, were a record-breaking 88.4m (290ft) long - bigger than the wingspan of an Airbus A380, or nearly the length of two Olympic-sized swimming pools. The swept area of such a mammoth rotor blade would cover Rome's Colosseum. But things move quickly in the wind turbine industry.

A longer blade means that you can harvest more wind energy. The power is basically dependent on the area of the disk covered by the path of the blades. So making a blade twice as long ...

At a wind speed of 10 m/s (19.4 knots), the turbine will be hit by 200 tons (181 metric tonnes) of air every second. The blade length of 75 m is not a kick-in-the-pants off the wingspan of an...
