Due to increased regulations and insurance requirements, water tanks for fire protection are increasing in demand. Having a water storage tank ready with the appropriate fire department connections and or ready to supply a fire sprinkler system ensures adequate response in case of an emergency, even in remote areas.

Fire water storage tanks are a critical component of commercial fire suppression systems, providing a ready supply of water to extinguish fires quickly and effectively. While most fire tanks are dedicated to fire suppression, some are equipped with dual connections for potable water use.

The FM approved Fire fighting water storage tanks play a vital role in the safety and protection of any structure; since the municipal water supply can be insufficient for fire suppression under some circumstances. They are used to store an adequate amount of water to be used by fire sprinkler systems or other fire fighting measures.
