WASHINGTON, D.C. - Today, U.S. Secretary of Energy Dan Brouillette announced \$100 million in funding for 10 Energy Frontier Research Centers (EFRCs) to accelerate the scientific breakthroughs needed to build a twenty-first-century energy economy and strengthen U.S. economic leadership and energy security.

They convert chemical energy to electrical energy and excel at storing energy. By contrast, capacitors store energy as an electric field, akin to static electricity. They cannot store as much energy as batteries in a given volume, but they can recharge repeatedly and do not lose the ability to hold a charge.

2.1 Electrochemical Energy Conversion and Storage Devices. EECS devices have aroused worldwide interest as a consequence of the rising demands for renewable and clean energy. SCs and rechargeable ion batteries have been recognized as the most typical EES devices for the implementation of renewable energy (Kim et al. 2017; Li et al. 2018; Fagiolari et al. 2022; Zhao ...
