What is a belt-drive generator?

A belt-drive generator is a type of generator, specifically Wanco's AR-Series, which is designed for horizontal operation. It requires the attachment of a motor, double pulleys, and belts for 3600-rpm operation. All models include built-in receptacles with circuit breakers.

What is a 48V belt-driven generator?

48V belt-driven generators are high voltage and high power generators that can now be sized up to 100 Amps, 200 Amps, and 300 Amps (48V - 5kW, 10 kW, and 15 kW). This provides OEM designers with the option of having large electrical power availability.

What is a 12/24V belt starter generator?

Traditionally, 12 and 24V belt starter generators have been lower voltage and low power (1 to 2 kW). They were designed to be run intermittently for short periods of time under full load conditions. For more information on our DC alternators, view our product portfolio.

A store like motion industries that sells bearings and gears also sells belts in the states, they are more helpful can get different belts top cog, bottom cog. power belts and green belts. If you search as many online sources as you can maybe one will have belt dimensions/specs in pic or description. _____

2. Take away the used Belt if Any. 3. Keep the following diagram in mind. 4. After checking the pullys, put the new belt as per the diagram and check for correct alignment. 5. After checking, put a lever between the engine and the generator to give the belt the required tension as Tensioner is not available in Corolla 2007 and all has to be manual.

(quoted from post at 20:59:08 09/20/21) I have an 8N 6V. The generator is mounted with a bolt through two brackets on the generator. No matter how I tighten things, over time the generator moves making the fan belt a bit loose.

only has 414hrs on it I would like to take the time to replace the 10 year old alternator/water pump belts. I am unsure whether I have an "A spec" or "B spec" model which dictates which belt/s I'll need.

She then quoted over \$800 for parts and labor to replace the "starting belts". Is there more than one belt? From this thread it seems like there is one belt and two tensioners. I called another dealership and they said replacing the starter-generator belt is ...

I don't know what size the belt is. Was waiting to get the old one off and measure it but still haven't been able to loosen the water pump pulley to remove the belt. May not be a standard belt anyway since it looks like someone fabricated a special bracket for mounting the 12V generator. Can let you know once I get it off.

Wang et al. achieved a high charge density of $250 \text{ } \mu\text{C m}^{-2}$ by fabricating a tube-like, silicone-rubber-based TENG with a rationally designed helix-belt contact structure (Figure 5b-iii). 59 Their shape-adaptive TENG can be transformed into wearable designs such as shoe soles and woven cloth, and it has been demonstrated to harvest electricity from human ...

The belt is a four ridge design and from what I could see, it was never put on right in the first place. Both pulleys have grooves where the belt ridges ride and one groove on each pulley was rusted while the others were nice and shiny. There was also evidence of the belt rubbing up against the bottom engine/generator case.

Always replace belts when required by the manufacturer. The two common types of generator engine belts used are: V Belt - This style belt is commonly with smaller or older applications. The V-belt has been created in the shape of a triangle to reduce belt slippage. Generally one V-belt drives one component (such as water pump or alternator).

They charged me 4 hours time to do the above services and sent me pictures of my cracked generator belt. (See below.) Note: The Onan service manual says to change the belt at 1000 hours, but we elected to do that at 500 because there was one bad crack; and the belt was 15 years old. There were smaller cracks that did not concern us.

The original belt was Onan part number 0511-0219 which cross-referenced to a NAPA A29 industrial belt. Our current 2018 Entegra Cornerstone has an Onan 12.5K diesel generator, but that generator doesn't have enough hours on it to need a new belt just yet. You post references two belts - a water pump belt and a "drive" belt.
