a fully-mixed sensible heat thermal energy storage system as it utilizes the heat capacity and the change in temperature of the storage material during charging or discharging processes. The set up in this study is a passive system which does not require the use of forced convection produced by pump (Fang et al., 2010) .

Data used for PTES and TTES simulation in Balmorel. The investment cost for PTES is assumed to decrease in the future as the technology matures, and there is a linear decrease from 2020 ...

It is proven that district heating and cooling (DHC) systems provide efficient energy solutions at a large scale. For instance, the Tokyo DHC system in Japan has successfully cut CO<sub>2</sub> emissions by 50 % and has achieved 44 % less consumption of primary energies [8]. The DHC systems evolved through 5 generations as illustrated in Fig. 1. The first generation ...

This review paper critically analyzes the most recent literature (64% published after 2015) on the experimentation and mathematical modeling of latent heat thermal energy storage (LHTES) systems in buildings. Commercial software and in-built codes used for mathematical modeling of LHTES systems are consolidated and reviewed to provide details ...
