Solar Panel Selection. Picking the right solar panels is a big part of setting up a solar system. You decide based on how well they work, how long they last, and how much money you have. There are three common types: monocrystalline; polycrystalline; thin-film panels. Monocrystalline panels are super efficient and made from a single silicon ...

Common solar panel types: Monocrystalline (mono) solar panels are cut from a single section of silicon. They are slightly more efficient than polycrystalline (poly) solar panels, which contain cells made of blended fragments of silicon.. Mono solar panels cost a bit more than poly panels, because their increased efficiency allows you to fit more solar in a smaller space.
