

How to install the rain line of the energy storage cabinet

This production line is used for automatic assembly of energy storage cabinets. All single machine equipment and distributed systems interact with MES through a scheduling system, achieving integration between equipment and upstream and downstream systems, matching production capacity, and meeting production process requirements.

2 1. Preface 1.1 Purpose The purpose of this manual is to ensure safe operation during installation, ensure the quality of equipment installation, ensure construction progress and promote installation technology.

Incorporating energy storage into the power grid system can effectively manage the demand side, eliminate the power grid peak, smooth the load curve, and adjust the frequency and voltage.

Based on various usage scenarios and combined with industry data, the general classification is as follows:
1-Discrete energy storage cabinet: composed of a battery pack, inverter, charge, and discharge controller, and communication controller. Each component is placed independently in the cabinet, connected through cables, and combined into a system.

Line the stands up with your line on the wall and position the cabinet on top. Mark the stud positions inside the cabinet. Then pre-drill through the cabinet into the stud. Secure the cabinet in place with screws.
