What is the ideal solar panel angle?

The solar panel angle of your solar system is different depending on which part of the world you are. Solar panels give the highest energy output when they are directly facing the sun. The sun moves across the sky and will be low or high depending on the time of the day and the season. For that reason the ideal angle is never fixed.

Power meters monitor your systems battery voltage, the level at which your batteries are charged, and the amount of power you consume. In the U.S., power providers are legally required to buy excess power from grid-tied small renewable energy system at the "avoided cost.". The avoided cost of electricity is the cost to the provider to produce the power itself, and ...
