What is a severe rating on a solar PV module?

The schematics in the Terminology section describe where each component is found on a common solar PV module. A Severity Rating is also defined to give users guidelines on how concerning a particular defect may be.

What if a solar PV module sample is rejected?

A solar PV module sample will be considered to be rejected due to its observable quality defects if any one of the following conditions are met: If any single observed defect has been evaluated as a Severity of 5. A Severity of 5 indicates a major quality issue; a critical failure or a fraudulent module.

Reading the Solar Panel Meter. To effectively read a solar panel meter, follow these steps: Identify the Readings: Locate the specific readings on your solar panel meter. Common readings include energy production (in kilowatt-hours), current energy generation (in watts), voltage, and sometimes the current flowing through the system (in amps).
