

How to use the energy storage lithium battery equalizer

Why do lithium ion batteries need to be equalized?

Due to production and manufacturing differences, the consistency of many lithium-ion batteries used in series and parallel will deteriorate, so battery equalization techniques are needed to maximize the available battery capacity and ensure safe battery pack operation[1-3].

How does a battery equalizer work?

The Equalizer is a small device that actively equalizes the voltage between battery packs. When it detects a voltage difference between different battery Cells, it kicks in and actively transfers energy from the battery with the higher voltage to the battery with the slightly lower voltage.

Why do lithium-ion batteries need a voltage-equalization control strategy?

In pursuit of low-carbon life, renewable energy is widely used, accelerating the development of lithium-ion batteries. Battery equalization is a crucial technology for lithium-ion batteries, and a simple and reliable voltage-equalization control strategy is widely used because the battery terminal voltage is very easy to obtain.

How to evaluate a battery cell equalizer?

Performance evaluation techniques of battery cell equalizer Various indicators justify the performance of an equalizer. A good equalizer must contain the following features: fully and accurately equalized voltages among the cells, minimum energy conversion loss, and fast equalization.

What are the advantages of a battery equalization system?

Transferring the energy from the first cell to the last cell takes a long time especially for long battery string, and has high current stress. Fast equalization speed, can use pack-to-cell and cell-to-pack topologies, and low magnetic loss due to the use of single winding.

What voltage should a lithium ion battery equalizer be?

Battery equalization voltages for lithium ion battery packs should be between 1.8 and 3 volts per cell in order to maintain performance. There are several equalizers on the market for different battery types, they are: Vicron battery balancer, HA Series Lithium ion Balancer and HWB series Lead ACid Battery Balancer:
