Does a portfolio of energy storage solutions make best economic sense?

Rather, a portfolio of storage solutions makes best economic sense for future energy systems, according to a recent National Renewable Energy Laboratory (NREL) analysis titled "Optimal energy storage portfolio for high and ultrahigh carbon-free and renewable power systems," published in Energy & Environmental Science.

Is pumped hydroelectric storage a good choice for large-scale energy storage?

Its ability to store massive amounts of energy per unit volume or mass makes it an ideal candidate for large-scale energy storage applications. The graph shows that pumped hydroelectric storage exceeds other storage systems in terms of energy and power density.

Why is energy storage important?

Energy storage is a potential substitute for, or complement to, almost every aspect of a power system, including generation, transmission, and demand flexibility. Storage should be co-optimized with clean generation, transmission systems, and strategies to reward consumers for making their electricity use more flexible.

What is the future of energy storage?

Storage enables electricity systems to remain in balance despite variations in wind and solar availability, allowing for cost-effective deep decarbonization while maintaining reliability. The Future of Energy Storage report is an essential analysis of this key component in decarbonizing our energy infrastructure and combating climate change.

Why do we need a co-optimized energy storage system?

The need to co-optimize storage with other elements of the electricity system, coupled with uncertain climate change impacts on demand and supply, necessitate advances in analytical tools to reliably and efficiently plan, operate, and regulate power systems of the future.

What are energy storage systems?

To meet these gaps and maintain a balance between electricity production and demand, energy storage systems (ESSs) are considered to be the most practical and efficient solutions. ESSs are designed to convert and store electrical energy from various sales and recovery needs[.,].
