

Is there a real energy transition in Italy?

There can be no real energy transition in Italy without electricity storage systems. And here Enel Green Power is also playing a leading role, particularly in battery energy storage systems (BESS), which are increasingly efficient and competitive, thanks to technological innovation.

What is a BESS energy storage system?

BEES, or battery energy storage systems, are an essential element of the energy transition: the Enel Group is playing an important role in the growth of the sector, in Italy and in the other countries where it is present. There can be no real energy transition in Italy without electricity storage systems.

Will Italy achieve 30-40 GW of battery storage capacity by 2050?

By 2050, Italy aims to achieve 30-40 GW of storage capacity. There are significant regional differences in the adoption of battery storage systems across the country. While most distributed battery adoption is occurring in the north, most of the larger-scale storage projects are in the south and on Italy's largest island, Sardinia.

Does Italy have a battery storage market?

This report is part of a series that analyses the battery storage market in select European countries. Italy has both a rapidly growing utility-scale market as well as a flourishing customer-sited battery storage market. Customer-sited storage adoption has been mainly driven by a combination of high electricity prices and generous tax incentives.

71 GWh of new grid-scale energy storage needs to be deployed by 2030 for Italy to decarbonise its energy system in line with the EU targets. ... The report is a deep-dive into the suitability of different technologies for deploying the 71 GWh of new large-scale energy storage that Terna forecasts Italy will need to decarbonise its energy system ...

Most future business cases for energy storage in Italy are now being structured around the capacity market plus energy arbitrage, unlike most of Europe where ancillary services are the main share. Batteries won substantial contracts in the February 2022 capacity market auctions by Terna, which gave 15-year contracts for 2024 as the delivery year.

Tradable Power Commodities and Derivatives. Italy's energy market offers trading in various commodities: Electricity and Power: These are the primary tradable commodities, with opportunities in both renewable and non-renewable sources. Gas: Italy's significant use of gas for energy production means gas trading is a vital part of the market.

STMicroelectronics has unveiled plans to construct a state-of-the-art manufacturing facility in Catania, Italy,

dedicated to producing power devices and modules using 200mm silicon carbide (SiC) technology. The facility will also include facilities for testing and packaging. When the SiC substrate manufacturing plant is completed on the same site, it will ...

successful Italian company offering energy storage systems (ESS, Energy Storage System), for residential and, to a greater extent, commercial and industrial uses. These are complex systems that store energy from renewable sources and release it when needed. These systems require a combination of interacting hardware and software components ...

UK renewables company Penso Power and investment firm BW Energy Storage Systems (BW ESS) are set to enter the Italian market through a partnership with local peer ACL Energy that will seek to deploy 395 MW of battery energy storage system (BESS) capacity in the country.

This paper offers a wide overview on the large-scale electrochemical energy projects installed in the high voltage Italian grid. Detailed descriptions of energy (charge/discharge times of about 8 h) and power intensive (charge/discharge times ranging from 0.5 h to 4 h) installations are presented with some insights into the authorization procedures, safety features, and ancillary services.

The panel discussion on Day 1 of the Energy Storage Summit EU in London last week. Image: Solar Media. Italy's grid-scale energy storage market opportunities are unlike anywhere else, but many challenges and uncertainties around the different revenue streams remain, including the upcoming MACSE capacity market auction.

Rome - July 4, 2023 - Matrix Renewables ("Matrix"), the TPG Rise-backed global renewable energy platform, today announced that it has started a partnership with Gravel A through a ...

The development of Battery Energy Storage Systems (hereinafter "BESS") in Italy has been limited by the fact that the spread of renewable sources is not such as to produce significant price ...

successful Italian company offering energy storage systems (ESS, Energy Storage System), for residential and, to a greater extent, commercial and industrial uses. These are complex ...

In 2024, Italy's energy storage market saw remarkable progress, with a 24.6% rise in the number of storage systems and a 30.4% increase in total rated power, reflecting the growth of larger, more efficient installations. To maintain grid stability, Terna forecasts the need for 71GWh of storage, equivalent to about 20GW of capacity by 2030.

Hydrogen is a key energy carrier that could play a crucial role in the transition to a low-carbon economy. Hydrogen-related technologies are considered flexible solutions to support the large-scale implementation of intermittent energy supply from renewable sources by using renewable energy to generate green hydrogen

during periods of low demand. Therefore, ...

But, many more are coming, as Energy-Storage.news explored in a special feature for Vol.35 of PV Tech Power, Solar Media's quarterly technical journal for the downstream solar and storage industries. While the first half was one of growth, the second quarter saw the first sequential fall in deployments in nine quarters.

So how much storage are we talking about and where will it get developed? System operator will drive BESS capacity volumes. Italy's long term contract tender mechanism to support storage investment was ratified in June 2023 (ARERA resolution 247/2023/R/eel), after an initial proposal in 2022.

Therefore, battery energy storage systems (BESS) are needed in Italy. The Italian market for BESS is growing rapidly and currently amounts to 2.3 GW but it almost exclusively consists of residential scale systems, associated with small scale solar plants, having an average capacity of less than 20 kWh.
