Over the past decade, global installed capacity of solar photovoltaic (PV) has dramatically increased as part of a shift from fossil fuels towards reliable, clean, efficient and sustainable fuels (Kousksou et al., 2014, Santoyo-Castelazo and Azapagic, 2014).PV technology integrated with energy storage is necessary to store excess PV power generated for later use ...

One of the primary challenges in PV-TE systems is the effective management of heat generated by the PV cells. The deployment of phase change materials (PCMs) for thermal energy storage (TES) purposes media has shown promise ...

The major challenge faced by the energy harvesting solar photovoltaic (PV) or wind turbine system is its intermittency in nature but has to fulfil the continuous load demand [59], [73], [75], [81].

Large-scale grid-connection of photovoltaic (PV) without active support capability will lead to a significant decrease in system inertia and damping capacity (Zeng et al., 2020).For example, in Hami, Xinjiang, China, the installed capacity of new energy has exceeded 30 % of the system capacity, which has led to signification variations in the power grid frequency as well as ...

2.1 Solar photovoltaic systems. Solar energy is used in two different ways: one through the solar thermal route using solar collectors, heaters, dryers, etc., and the other through the solar electricity route using SPV, as shown in Fig. 1.A SPV system consists of arrays and combinations of PV panels, a charge controller for direct current (DC) and alternating current ...
