### What is thermal energy storage?

Thermal energy storage could connect cheap but intermittent renewable electricity with heat-hungry industrial processes. These systems can transform electricity into heat and then, like typical batteries, store the energy and dispatch it as needed. Rondo Energy is one of the companies working to produce and deploy thermal batteries.

### What is the 11th breakthrough technology of 2024?

The systems, which can store clean energy as heat, were chosen by readers as the 11th Breakthrough Technology of 2024. We need heat to make everything from steel bars to ketchup packets. Today, a whopping 20% of global energy demand goes to producing heat used in industry, and most of that heat is generated by burning fossil fuels.

#### How long can a battery store energy?

Handling the fluctuating power production of renewables will require cheap storage for hours or even days at a time. New types of iron-based batteries might be up to the task. Oregon-based ESS, whose batteries can store energy for between four and 12 hours, launched its first grid-scale projects in 2021.

#### Can K-Na/S batteries save energy?

In a new study recently published by Nature Communications, the team used K-Na/S batteries that combine inexpensive, readily-found elements -- potassium (K) and sodium (Na), together with sulfur (S) -- to create a low-cost, high-energy solution for long-duration energy storage.

#### Could carbon black form a low-cost energy storage system?

Two of humanity's most ubiquitous historical materials, cement and carbon black (which resembles very fine charcoal), may form the basis for a novel, low-cost energy storage system, according to a new study.

Carbon is the most commonly utilized component material, and it has garnered significant interest because of its high electronic conductivity, large specific surface area, controllable pore size, excellent chemical stability, and good mechanical strength [5, 6]. Based on structural differences, carbon-based materials can be categorized into two groups [7]: graphite ...

But far beyond devices and circuitry, materials science stands at the centre of innumerable breakthroughs across energy, future cities, transit, and medicine. And at the forefront of COVID-19, materials scientists are
