What is a 400V rooftop air conditioner?

This rooftop mounted air conditioner available in 400V is designed for cooling down autonomous, driverless, self-driving shuttles, buses, electric vehicles, and trucks running in a high outdoor temperature up to 52 degrees Celsius. There are no expensive converters needed to run since it completely 400V.

Why should you buy a specialized enclosure air conditioner from Kooltronic?

A specialized enclosure air conditioner from Kooltronic can help extend the lifespan of battery energy storage systems and improve the efficiency and reliability of associated electronic components. Without thermal management, batteries and other energy storage system components may overheat and eventually malfunction.

There are top quality super energy efficient aircon units in the marine market that run direct off DC but at 48V and yes super pricey. The process of boosting low voltage up to high is very inefficient. And it really is not realistic to think you'll run so many Wh per day off battery stored energy anyway.

If you plan on using the battery-powered air conditioner at night, you would need one that has low noise levels. Fortunately, most battery-powered air conditioners come with low noise levels, most under 60 dB
