Abstract: Aiming at the punishment problem of large industrial users who exceed the maximum demand under the condition of demand electricity price, an optimal configuration model of user-side energy storage system based on the two-layer decision is proposed. Under the condition of the maximum demand billing in the two-part electricity price, the objective function of the outer ...

This paper proposes a new method for configuring hybrid energy storage systems on the user side with a distributed renewable energy power station. To reasonably configure the hybrid energy storage system, this paper divides the whole optimization into two stages from the two dimensions of capacity and power: supercapacitor and battery optimization. To minimize the fluctuation of ...

1. Introduction. Energy storage systems play an increasingly important role in modern power systems. Battery energy storage system (BESS) is widely applied in user-side such as buildings, residential communities, and
