

No wind for the wind turbines around the world

Wind turbines work by capturing the kinetic energy in the wind with rotor blades, which then drive a generator to produce electricity. Where are the largest wind power producers located? China, the United States, Germany, and India are ...

The global wind industry installed a record 117GW of new capacity in 2023, making it the best year ever for new wind energy, finds this year's Global Wind Report from the Global Wind Energy Council. The report finds the wind ...
