PV system monitoring from KOSTAL: simple PV system monitoring If you've opted for a photovoltaic system, it's important to keep tabs on all its energy yields and energy flows. Using KOSTAL's monitoring solutions, the system operator ...

Do not operate or maintain the inverter until at least 5 minutes after disconnecting all sources from DC and AC sides. The DC conductors of this PV system are normally ungrounded but will become intermittently grounded without indication when the inverter measures the PV array isolation. If there is a fault and it is unsafe to access the inverter:

In the event of a voltage dip associated with a short-circuit, the PV inverter attempts to maintain the same power extraction by acting as a constant power source. However, the current-limiting strategy of the PV inverter works to restrict the fault current in accordance with the maximum capacity of its electronic components.
