The Best Solar Greenhouse Heaters. Best Solar Furnace: Nakoair Solar Air Collector Best Electric Greenhouse Heater: Bio Green Palma Greenhouse Heater Best PV Panel for Greenhouse Heating: Renology 200W Solar Starter Kit The two most practical options are a PV system, requiring panels and a space heater, or a solar furnace.

The solar PV panels produce heat as a byproduct and in the PVT system, a separate unit takes this residual heat (which would otherwise have been wasted) and uses it to heat a hot water cylinder. By doing this it also enables the solar PV panels to maintain a lower and therefore more efficient operating temperature.

It's important not to confuse solar PV panels with solar thermal panels. While solar PV panels generate electricity, solar thermal panels heat the water in a cylinder. This gives you a way to heat domestic hot water for free. It's worth noting that electric combi boilers aren't installed alongside an external cylinder.

There are two basic types of active solar panel heating systems: solar air space heating systems and solar water heating, also known as hydronic systems. Solar air space heating A roof ...
