So, Required solar panel output =  $30 \text{ kWh} / 5 = 6 \text{ kW}$ . Multiply the required solar panel output by a factor of 1.2 to 1.5 to account for efficiency losses and climate variations. Required solar panel output with Buffer (Watts) =  $6 \text{ kW} * 1.20 = 7.2 \text{ kW}$ . The average solar panel output efficiency in the U.S. is rated between 200 and 400 watts.
