After installing the solar panels, it's time to link them to key parts. This step shows how to connect the panels to the inverter. The inverter changes the DC power to the AC power your home uses. Connecting the Solar Panels Array to the Inverter. Solar panels link in a series to create an array. This array then connects to the inverter.

$N \text{ modules} = \text{Total size of the PV array (W)} / \text{Rating of selected panels in peak-watts}$ . Suppose, in our case the load is 3000 Wh/per day. To know the needed total W Peak of a solar panel capacity, we use PFG factor i.e.  $\text{Total W Peak of PV panel capacity} = 3000 / 3.2 \text{ (PFG)} = 931 \text{ W Peak}$ . Now, the required number of PV panels are  $= 931 / 160\text{W} = 5.8$ .

If you follow these steps, connecting your PV panels to an inverter shouldn't be too difficult. 1. Mounting PV Panel. Location and Orientation; Consider elements like sunshine exposure and shade to choose the best spot ...
