Open circuit voltage - the output voltage of the PV cell with no load current flowing; Short circuit current - the current which would flow if the PV sell output was shorted ... For maximum power, any solar radiation should strike the PV panel at 90°. Depending where on the earths surface, the orientation and inclination to achieve this varies.

Panel Capacity: Choose solar panels with sufficient wattage to meet the energy demands. High-efficiency panels are recommended. Total Number of Panels: Divide the total daily energy requirement of the pump by the average daily energy output per solar panel to find the number of panels needed.; Solar Pump Inverter Selection: Inverter Type: Use a 3-phase ...

GD100-PV series VFD solar drives are the ones recently launched by INVT especially for solar pumping applications. Based on the original solar pump inverter products, which optimizes usability and performance, and extends the applicable voltage levels and power range of the product. The voltage level [...]

Panel temperature will affect voltage - as has been discussed in another blog. Have a look at these I-V (Current vs Voltage) and P-V (Power vs Voltage) charts for a 305W solar panel from Trina Solar. You can see in the P-V curve that as the solar radiation decreases from 1000W/m2 to 200W/m2, the power drops proportionally - from 300W to 60W.
