What is a solar tracker? Ground mounted solar installations can use solar trackers to tilt the angle of solar panels throughout the day, maximising generation. They are typically used in large scale commercial or utility projects - not residential - as they come with added setup and maintenance costs, due to the additional moving equipment.

The installation selection of photovoltaic ground brackets is mainly based on factors such as the fixing method of the bracket, terrain requirements, material selection, and the weather resistance, strength, and stiffness of the bracket. First, there are many fixing methods, such as pile foundation method (direct burial method), concrete block weight method, pre-embedded method, ground ...
