

What is a containerized maritime energy storage solution?

ABB's containerized maritime energy storage solution is a complete, fireproof self-contained battery solution for a large-scale marine energy storage.

What energy storage technologies can a seaport use?

Thanks to the rich energy sources, ports, especially large seaport integrated energy systems, can apply various energy storage technologies such as electric energy storage, thermal energy storage, natural gas storage, and hydrogen storage.

What is containerized energy storage?

ABB's containerized energy storage solution is a complete, self-contained battery solution for a large-scale marine energy storage. The batteries and all control, interface, and auxiliary equipment are delivered in a single shipping container for simple installation on board any vessel. How does containerized energy storage work?

What is a container energy storage system?

Container energy storage systems are typically equipped with advanced battery technology, such as lithium-ion batteries. These batteries offer high energy density, long lifespan, and exceptional efficiency, making them well-suited for large-scale energy storage applications.

3. Integrated Systems

How does a maritime energy storage system work?

The maritime energy storage system stores energy when demand is low, and delivers it back when demand increases, enhancing the performance of the vessel's power plant. The flow of energy is controlled by ABB's dynamic Energy Storage Control System.

What are the benefits of a vessel energy storage system?

The system integrates smoothly with vessel systems and is ideal for retrofits and newbuilds. One of the key features is the ability to access the system from outside the unit for further safety and maximized use of space in the container. Get the benefit of energy storage without rearranging your vessel.

Mauritius, through its geographical location, is found on one of the busiest shipping lane between central Asia, Africa and South America. Gradually, Port Louis Harbour is witnessing an increasing demand for bunker fuels from vessels connecting the West to Asia and vice versa.
