Archer Erika Jones shooting a compound bow at the 2013 Archery World Cup. The bow has the axle attaching the limb to cam mounted at the edge of the cam as opposed to the center. In modern archery, a compound bow is a bow that uses a levering system, usually of cables and pulleys, to bend the limbs. [1] The compound bow was first developed in 1966 by Holless ...

Rubber band energy storage compound bow

The bow's riser is the "middle" portion of the bow which contains the grip and is attached to the bow's limbs. Most compound bow risers are made from aluminum and are either forged or machined. They generally feature a multitude of cut-outs that serve to reduce the bow's overall weight while still maintaining their strength and stability.

In this video, Lusitano 9514 will show you how to make a homemade rubber band bow and arrow out of common household items. To do it, you will only need a basic plastic coat hanger, a long rubber band, and some kind of a stick (for the "arrow"), all of which are quite inexpensive. Watch Lusitano 9514 demonstrate for you exactly how to make the bow and ...
