

Solar power generation in the south during the rainy season

Does rain affect solar generation?

There is an apparent dip in solar generation during the heavy rainfall season (SW: Southwest monsoon), and the significant effect of rain on the AC generation is evident in the consecutive years as well. This is in direct correlation with the rainy months that consistently occur during June, July, and August in this climatic zone.

How can solar energy be used in the rainy season?

This information enables better management of energy resources during the rainy season. Combining solar energy with other renewable sources, such as wind or hydroelectric power, in hybrid systems provides a more consistent and reliable energy output throughout the year.

Do solar panels work in rainy seasons?

While solar panels can still work in dim light conditions, their efficiency is significantly compromised. The power output during rainy seasons may be insufficient to meet high energy demands. Rainy seasons often bring with them the harshest storms, including strong winds and heavy rains.

How do rainy seasons affect solar energy production?

Rainy seasons contribute to the overall environmental sustainability of solar energy production. The reliance on a renewable energy source aligns with the broader goal of reducing dependence on fossil fuels, mitigating climate change, and promoting a greener energy ecosystem.

Do solar panels still produce electricity when it rains?

Contrary to popular belief, when it's raining, solar power systems still generate electricity. Panels operate most efficiently in full sun, but they don't stop producing electricity when it is raining or cloudy. The fact is, visible light still gets through rain and clouds. We can all see that the sky isn't completely dark when it rains.

Does rain affect PV power plants during monsoon season?

A lot of utility-scale PV power plants are being installed in tropical regions owing to the increased sunshine hours especially during the summer season. The influence of rain on the performance of PV power plants during monsoon seasons in a tropical climate is not studied in detail.
