The tracking photovoltaic bracket can adjust the angle of the photovoltaic module in real time according to the position of the sun, so that it is always facing the solar radiation, thereby maximizing energy output. Compared with fixed photovoltaic brackets, tracking photovoltaic brackets can achieve higher power generation efficiency. 2.

The photovoltaic fixed bracket is an important part of the solar photovoltaic power generation system. It is mainly used to firmly support photovoltaic components (such as solar panels) and ensure that they can face the sun at a fixed angle for a long time, thereby effectively absorbing and Convert solar energy into electrical energy.

PV brackets can be divided into three types: fixed, tilt-adjustable, and auto-tracking type, and its connection method generally has two forms of welding and assembly. Among them, fixed-type bracket includes roof-type bracket, ground type bracket, and water type bracket. ... With the continuous promotion of distributed photovoltaic power ...
