

Thermal management of container energy storage

The energy storage system in this example uses a standard 20-foot container and is equipped with a lithium ion BMS, inverter, liquid cooling system, power distribution cabinet, fire extinguishing device, etc.. The battery system is graded into cells, battery packs, battery clusters, and battery compartments.

In recent years, in order to promote the green and low-carbon transformation of transportation, the pilot of all-electric inland container ships has been widely promoted [1]. These ships are equipped with containerized energy storage battery systems, employing a "plug-and-play" battery swapping mode that completes a single exchange operation in just 10 to 20 min [2].
