

This paper investigates an ESS based on supercapacitors for trams as a reliable technical solution with considerable energy saving potential and proposes a position-based Takagi-Sugeno fuzzy (T-S fuzzy) PM for human-driven trams with an ESS. Energy storage systems (ESSs) play a significant role in performance improvement of future electric traction ...

Following a major accident involving an Interstate bus and a truck that took place on the N8 early this morning, seven people were declared dead on the scene of the accident. This includes both drivers and five passengers. According to the Department of Health, there were more than 60 passengers on board - 3 were [...]

In order to design a well-performing hybrid storage system for trams, optimization of energy management strategy (EMS) and sizing is crucial. This paper proposes an improved EMS with energy ...

Battery Energy Storage System (BESS) is one of Distribution's strategic programmes/technology. It is aimed at diversifying the generation energy mix, by pursuing a low-carbon future to reduce the impact on the environment. BESS is a giant step in the right direction to support the Just Energy Transition (JET) programme for boosting green energy as a renewable alternative source.

Uneven heat dissipation will affect the reliability and performance attenuation of tram supercapacitor, and reducing the energy consumption of heat dissipation is also a problem that must be solved in supercapacitor engineering applications. This paper takes the vehicle supercapacitor energy storage power supply as the research object, and uses computational ...

A hybrid energy storage system (HESS) of tram composed of different energy storage elements (ESEs) is gradually being adopted, leveraging the advantages of each ESE. The optimal sizing of HESS with a reasonable combination of different ESEs has become an important issue in improving energy management efficiency. Therefore, the optimal sizing ...
