Can best and TS improve the flexibility of the power grid?

We can conclude that the cooperation of BEST and TS could greatly enhance the flexibility of the power grid from the transmission side, which is reflected as a substantial overall operating cost reduction and a lower renewable energy shedding ratio.

Is the power grid facing a flexibility deficiency problem?

The renewable share of global power generation is expected to grow from 25% in 2019 to 86% in 2050 . With the penetration of renewable energy being higher and higher in the foreseen future, the power grid is facing the flexibility deficiency problem for accommodating the uncertainty and intermittent nature of renewable energy .

Can transmission topology be optimized during power grid operation?

In the traditional, transmission topology is regarded to be unchanged. In this paper, we consider the TS flexibility and allow the transmission topology optimization during power grid operation.

Does a modified IEEE rts-79 system improve power grid flexibility?

A case study on a modified IEEE RTS-79 system is provided to validate the effectiveness of the proposed model. The results show that the BEST and TS have a synergistic effect on enhancing power grid flexibility, which reflects in this study as the power grid operating economics improvement and renewable energy curtailment reduction.
