Are battery-electric trolley buses a viable alternative to in-motion charging?

The trolley:2.0 project therefore investigated battery-electric trolley buses and how they can open up further advantages through in-motion charging concepts. The potential of this technology includes efficient and reliable operation, as the proven technology of the trolley bus is combined with modern energy storage technology.

Can a battery trolleybus reduce power surges?

Further research is required in this field; - using battery trolleybuses/IMC e-buses can limit the power surges at existing power substations- at peak demand "smart charging" trolleybuses can reduce the battery recharging or use the traction batteries for acceleration. UNECE 100 5.3.:

Are battery-supported trolleybuses a way forward to electric public transport?

Public The trolley:2.0 partners aimed to prove that battery-supported trolleybuses are a way forward towards electric public transport systems in European cities by demonstrating the new charging concept in-motion charging (IMC), that allows for the partial off-wire operation of hybrid-trolleybuses in remote sections of the networks.

What is a trolley use case?

The trolley:2.0 use cases aimed to demonstrate efficient public transport, flexible operation and simplified extension of trolleybus networks as well as the combined use of the existing trolley grid infrastructure for further electrification of mobility in cities.

How to connect EV charger to trolleygrid?

2019-02-28 2020-10-31 Status The EV charger could be connected to the trolleygrid ordinarily as a 2-port-converter(2PC) connected to one section, or as a 3-port-converter (3PC) by connecting it to two sections. The 3-port converter (3PC) is more efficient than 2-port converter (2PC) for relatively short section lengths.

Is BBG converting a diesel-powered regional bus line into a battery electric trolleybus?

BBG has converted a diesel-powered regional bus line into a battery electric trolleybus line. All 12 trolleybuses are now equipped with batteries for this purpose. Since September 2020, the first battery-powered trolleybuses are operated on this new IMC line 910.

At PowerSwitch we help developers and independent power producers integrate energy storage solutions into power systems. PowerSwitch was formed to support companies that research, design, and implement energy storage systems. As stewards of the planet, we see enormous potential in the application of thoughtfully designed energy storage systems.
