How do I choose the most energy-efficient kitchen appliances?

When it comes to choosing the most energy-efficient kitchen appliances, O'Loan recommends you "consider the size of appliance you need with the highest energy rating and this will help you find the most cost-effective appliance for you".

Is a home appliance energy efficient?

It's easier than you may think to find out if a home appliance is efficient or not. This is because every larger home appliance (as opposed to smaller ones such as air fryers, kettles and toasters) comes with an energy rating label, awarded based on typical household usage.

Should you invest in more energy efficient appliances?

One simple way of doing this is to invest in more energy efficient appliances when yours need replacing, whether it's a washing machine, oven or even a fridge freezer - and helpfully, brands are continually finding new ways to improve the performance and energy ratings of their offerings.

Does upgrading your kitchen appliances make a difference?

According to Joanna O'Loan, Energy Saving Trust's Knowledge Manager, upgrading your kitchen appliances does make a genuine difference to your bills. "Upgrading your dishwasher from an E rated model to a model rated A could save you £30 a year, while upgrading your fridge-freezer from an F to an A could save £50 a year," she says.
