The most common type of solar panel system used for domestic homes is PV - photovoltaic - panels. They collect energy from the sun in photovoltaic cells, which is then passed through an inverter to generate electricity. Each photovoltaic cell is made up of a series of layers of conductive material. Silicon is the most common.

A key challenge to the wide-scale implementation of photovoltaic solar panels (PV) in cold and remote areas is dealing with the effects of snow and ice buildup on the panel surfaces.

Universal Solar Connectors have multiple contacts and a contact pin diameter of 4mm. Manufacturers design Solar Connectors to be weatherproof, UV-resistant, and resistant to harsh conditions to provide a secure connection for the long term. Nonetheless, an issue with the connector may introduce weather vulnerabilities
