The growing shift toward renewable energy is not slowing down. The United States alone forecasts solar power generation to grow 75% by 2025, with wind power generation expected to grow 11%. As the industry grows rapidly, it's becoming more apparent to renewable energy companies that the existing infrastructure can't keep up.

The growth and success of renewable energy relies heavily on the ability to store energy. That's where we come in. Our utility-scale battery energy storage systems (ESS) store power generated by solar or wind and then dispatch the stored power to the grid when needed, such as during periods of peak electricity demand.

The BESS container integrates solar and wind energy to provide a reliable energy supply. Load Shifting. ... Container energy storage is usually pre-installed with key components such as batteries, inverters, monitoring systems and the corresponding interface and connection facilities, making the installation process simple, fast and efficient. ...
